PRESS RELEASE

Drops of Sustainable Development: Innovative Educational Tools for a Greener and More Sustainable Future

June 2026

The international Erasmus+ project **Drops of Sustainable Development (DSD)** continues to deliver innovative educational resources aimed at strengthening sustainability competences among adult learners, educators, trainers, and community organizations across Europe.

Co-funded by the Erasmus+ Programme of the European Union, the project brings together organizations from Romania, Croatia, Italy, Spain, and Cyprus with a shared goal: supporting the ecological transition through accessible, practical, and engaging educational tools.

During the first phase of implementation, project partners successfully developed and published the **DSD Best Practices Collection**, a compilation of inspiring examples and initiatives promoting sustainability, environmental awareness, circular economy principles, and community engagement from different European countries.

Building on these findings, partners finalized the **DSD Toolkit**, an innovative learning resource designed to provide adult educators and learners with practical knowledge and skills related to sustainable development. The toolkit includes modules covering:

- Sustainability and Sustainable Development
- Ecological Transition
- Circular Economy
- Climate Change and Environmental Responsibility
- Community Engagement and Sustainable Practices

The project has also developed an **online learning platform** where educational materials, resources, and interactive learning activities are freely available to participants and stakeholders.

Recent international project activities included a Learning, Teaching and Training Activity (LTTA) in Zaragoza, Spain, where partners tested educational methodologies, interactive exercises, and digital learning solutions that will support the final implementation of the toolkit across participating countries.

Over the coming months, project partners will continue piloting the educational materials with adult learners, collecting feedback, improving learning resources, and organizing dissemination events to share project results with wider audiences.

The DSD project seeks to empower individuals and communities to become active contributors to a greener, more sustainable future by providing practical tools, knowledge, and opportunities for lifelong learning.

The project consortium invites educators, NGOs, public authorities, and interested citizens to explore the available resources and follow the project's progress.
